*Christian Trott*

Friday, April 26, 2023

9-9:10 AM PT

“Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy’s National Nuclear Security Administration under contract DE-NA0003525.”

SAND2024-5783

# Tools for Kokkos Programming

**Kokkos Tools** = A set of event-callback tool libraries, and the common infrastructure to support them

## Manual

- 1. Profile:**
  - TPL Vendor connectors, e.g., nvtx, roctx
  - Timer
  - Space-time-stack
  - Memory usage
- 2. Debug:**
  - kernel logging
  - memory events

## Automated

### ○ **Auto-analyze:**

- Test case generation
- Performance insights
- HPC System Monitoring

nvtx-connector:  
HPCToolkit  
(John Mellor-Crummey et al)

### ○ **Auto-fix:**

- fault-correction
- auto-tuning

tau/apex (Kevin Huck, Sameer Shende et al)

→ Almost all tools use the Kokkos Tool interface hooking into Kokkos core (Kokkos\_Profiling.hpp)

# Kokkos Example Code for CPU+GPU

Needs: 1. Scientific Discovery 2. Engineering Innovation 3. service for Industry, AI/ML

~/stencil.cpp

```
#include <Kokkos_Core.hpp>
int main(int argc, char* argv[])
{
  Kokkos::initialize(argc, argv);
  Kokkos::View<double*> u(102, anew(102));
  Kokkos::View<double*>::HostMirror host_u = create_mirror_view(u);
  deep_copy(host_u, 1.0);
  int tstep = 0;
  while(tstep < 1000){
    Kokkos::Profiling::pushRegion("myCoolTimestepRegion");
    deep_copy(u, host_u);
    parallel_for(102, LAMBDA(int i){
      anew[i] = (u[i-1] + u[i] + u[i+1])/3.0;
    });
    deep_copy(host_u, anew);
    Kokkos::Profiling::popRegion("myCoolTimestepRegion");
    tstep++;
  }
  Kokkos::finalize();
}
```

Kokkos parallel  
computation  
kernel

Host-to-Device  
data transfer

Start  
Kokkos  
Tool

Stop  
Kokkos  
Tool

```
git clone github.com/kokkos/kokkos-tools; cd kokkos-tools; cmake .. -DCMAKE_INSTALL_PREFIX=${YOUR_KTO_INSTALL_DIR}/; cd-;
export KOKKOS_TOOLS_LIBS=${YOUR_KTO_INSTALL_DIR}/kp_kernel_logger.so; g++ stencil.cpp; ./stencil.out
```

## Kokkos Tools: Available Set of Tools

Category	Available Kokkos Tools
Utilities	filter, sampler
Profiling	timer, space_time_stack, memory_usage, papi
Debugging	logger, memory_events
Tracing	systemtap, chrome-tracing, perfetto
Vendor Connectors	nvtx, roctx, vtune
Energy	variorium
Sophisticated Tools	caliper, apex, ldms

1. Developing a tool of Kokkos Tools requires implementing a small number of event callbacks corresponding to Kokkos user functions, e.g., `parallel_for`, `Kokkos_initialize`
2. Each tool operates independently, though any subset of Kokkos Tools can be built as one library.
3. The Kokkos Tools implementation facilitates low instrumentation overhead through capabilities such as its sampling and filtering utilities.

[1] David Boehme, Kevin Huck, Shravan Kale., Vanessa Surjadidjaja, and Vivek Kale. **Performance Analysis and Auto-tuning Tools for Performance Portable Parallel Programs**. 2023 ACM/IEEE International Conference for High Performance Computing Networking, Storage, and Analysis. Denver, CO, USA. November 12-17, 2023.

# Agenda for the Session

1. 00-9:10 AM PT: Overview of tools for Kokkos including basic tools- Vivek Kale
2. 9:10-10AM PT: HPCToolkit for Kokkos applications - John Mellor-Crummey
3. 10:00 -10:30 AM PT: autotuning with Apex connector - Kevin Huck
4. 10:30 AM - 11:00 AM PT: all hands-on with
  - nvtx-connector
  - HPCToolkit
  - tau\_exec and apex\_exec - Kevin and Sameer
5. 11-12 PM PT: Build your own Kokkos tool - Daniel Arndt

# Appendix

# Aiding Kokkos Parallel Programming via Kokkos Tools Set

## Sample Output

## Quick Start

### Setup

#### From source:

#### *Install*

```
git clone github.com/kokkos/kokkos-tools;
```

#### *Build*

→ Make

```
cd toolName; make;
```

→ CMake

```
mkdir build; cd build; cmake ..; make; make
install;
```

### Use

```
export KOKKOS_TOOLS_LIBS="toolName.so; toolName2.so;";
./myKokkosApp.exe
```
